Pediatric Neurology Part I: Chapter 27. Memory disorders in children (Handbook of Clinical Neurology) Steve Majerus, Martial Van Der Linden

Memory disorders are a frequent consequence of a variety of childhood neurological conditions. We will review the characteristics of memory disorders as a function of the main four memory systems: short-term memory, episodic memory, semantic memory, and procedural memory. For each system, we will identify the most typical cerebral and/or genetic correlates, and we will discuss the impact of impairment of each memory system on everyday life functioning.
