Extreme Value Modeling and Risk Analysis: Methods and Applications

Extreme Value Modeling and Risk Analysis: Methods and Applications presents a broad overview of statistical modeling of extreme events along with the most recent methodologies and various applications. The book brings together background material and advanced topics, eliminating the need to sort through the massive amount of literature on the subject.

After reviewing univariate extreme value analysis and multivariate extremes, the book explains univariate extreme value mixture modeling, threshold selection in extreme value analysis, and threshold modeling of non-stationary extremes. It presents new results for block-maxima of vine copulas, develops time series of extremes with applications from climatology, describes max-autoregressive and moving maxima models for extremes, and discusses spatial extremes and max-stable processes. The book then covers simulation and conditional simulation of max-stable processes; inference methodologies, such as composite likelihood, Bayesian inference, and approximate Bayesian computation; and inferences about extreme quantiles and extreme dependence. It also explores novel applications of extreme value modeling, including financial investments, insurance and financial risk management, weather and climate disasters, clinical trials, and sports statistics.

Risk analyses related to extreme events require the combined expertise of statisticians and domain experts in climatology, hydrology, finance, insurance, sports, and other fields. This book connects statistical/mathematical research with critical decision and risk assessment/management applications to stimulate more collaboration between these statisticians and specialists.

From reader reviews:

Doris Anderson:

Have you spare time for just a day? What do you do when you have a lot more or little spare time? That's why, you can choose the suitable activity to get spend your time. Any person spent their particular spare time to take a go walking, shopping, or went to often the Mall. How about open or perhaps read a book called Extreme Value Modeling and Risk Analysis: Methods and Applications? Maybe it is to be best activity for you. You already know beside you can spend your time together with your favorite's book, you can more intelligent than before. Do you agree with their opinion or you have additional opinion?

Tony Paulson:

Reading a guide tends to be new life style within this era globalization. With examining you can get a lot of information which will give you benefit in your life. The first thing that you ask may be what kinds of e-book that you should read. If you want to attempt look for book, may be the reserve untitled Extreme Value Modeling and Risk Analysis: Methods and Applications can be good book to read. May be it is usually best activity to you.

Louis Patrick:

The reason? Because this Extreme Value Modeling and Risk Analysis: Methods and Applications is an unordinary book that the inside of the publication waiting for you to snap the item but latter it will zap you with the secret the idea inside. Reading this book next to it was fantastic author who also write the book in such incredible way makes the content on the inside easier to understand, entertaining technique but still convey the meaning thoroughly. So , it is good for you because of not hesitating having this any more or you going to regret it. This excellent book will give you a lot of rewards than the other book include such as help improving your skill and your critical thinking means. So , still want to hesitate having that book? If I have been you I will go to the reserve store hurriedly.
